

**Greater Cleveland area Engineering Manager** - position open due to growth; highly promotable position as they will double in size within the next year!

Below is the job description, please review and if interested, send an updated resume, your salary requirements and a few notes on how you feel your background would be a good fit! I look forward to speaking to you!

**This position is responsible for:**

- Development of manufacturing processes, engineering prints, new product launch process, new technology implementation, facilities and equipment maintenance, facilities design, utilities, and/ or construction for a manufacturing plant in a multi-site environment in North America. Functions managed may include product engineering, manufacturing engineering, skilled trades, and environmental compliance.
- Product introduction process. Work with customer service, manufacturing, supply chain and quality departments to ensure the orderly introduction of new or modified products and or processes.
- Establish equipment, machine and tooling requirements for new products, new processes, and existing product manufacturing modifications.
- Supervise assigned associates in performance of their duties including but not limited to interviewing, hiring, training, development, mentoring, evaluations and discipline. Set short term goals and objectives for staff and department which are aligned with the Organization's business strategies and objectives.
- Compile and update as necessary, manufacturing procedures, machine layouts, and other data necessary for the writing or routing sheets for all operations.
- Work with manufacturing in the resolution of processing problems.
- Optimize capital and expense investment in manufacturing processes based on analyzing volume, cost reductions, quality requirements, safety and health needs, environmental and energy consumption minimization.
- Maintain documentation, maintenance and operating records and manuals for all installed equipment within each facility.
- Support new process concepts, advanced manufacturing systems, lean manufacturing systems, data acquisition solutions, and custom designed machinery and equipment. Responsible for the design, development, procurement, installation, implementation, functional tryout, and operating procedures for new and/or improved processes necessary for manufacturing.
- Continually analyze machine downtime, machine capabilities and provide Engineering solutions to maximize machine uptime and variable expense reduction.
- Management of plant operating budgets for MRO, tooling, and outside services related to plant machinery and equipment.
